## HYCON HYDRAULIC BREAKERS

A good breaker works when you need it.

HYCON breakers are designed to give maximum power, durability and best operator comfort.

The breakers are designed to withstand blank firing. This is a unique feature.

They have high performance compared to weight and come standard with anti vibration handles.

The unique PROLINE handle offers the operator a vibration level down to as little as 4.8 m/s<sup>2</sup>, which give maximum protection and less fatigue. The result is higher efficiency – you get more work done.

The breakers have very few wearing parts ensuring the lowest lifetime cost possible. A HYCON breaker gives you the best TCO (Total Cost of Ownership).

Quality is never an accident – it is always the result of intelligent effort.
